SHADERS

SP2_VFX_AdvanceFlame	Creates a flame on a mesh using an alpha flame texture, two noise textures to drive motion, and an additional distortion texture applied to the mesh UVs.
SP2_VFX_AnimatedMesh	Creates motion to a mesh using an alpha texture and two noise textures, with an additional distortion texture applied to the mesh UVs. Includes an option to control vertex animation through a noise texture.
SP2_VFX_AnimatedParticle	Transforms a simple particle by adding extra motion using two noise textures, with options for UV distortion through a noise map, color blending, and trail mode.
SP2_VFX_AuraDecal	Adds complexity to an aura texture using two noise textures and color blending.
SP2_VFX_Blackhole	Generates a procedural black hole effect with enhanced motion using a noise texture.
SP2_VFX_Buffs	Enhances buff meshes with layered noise motion, fresnel effects, and emission.
SP2_VFX_Cloud	Generates a procedural cloud effect with color blending.
SP2_VFX_DecalConjuration	Adds motion to decals and conjuration animations using a black-and-white alpha mask, typically combined with a normal texture to create ground rift effects.
SP2_VFX_DissolveMesh	A lit shader that allows meshes to dissolve, with an additional option for a fresnel effect.

SP2_VFX_Distortion	Creates scene distortion through an alpha and normal texture, featuring an option to animate the distortion using the normal map.
SP2_VFX_EarthquakeDecal	Adds depth to ground rift effects using all texture maps, featuring wave distortion that creates the illusion of motion on the ground. MaskMap: (R: Metallic, G: Smoothness, B: Height, A: Emission)
SP2_VFX_ExpansiveWave	Adds depth to an expansive wave mesh (disc) through distortion and offset motion.
SP2_VFX_Flame	Generates a simple procedural flame effect.
SP2_VFX_Flipbook	A simple flipbook shader with color blending.
SP2_VFX_Laser	Creates a procedural laser effect using two noise textures for Line Renderer materials.
SP2_VFX_Lava	Generates a procedural lava effect.
SP2_VFX_Magic Conjunction	Adds motion to a texture and conjunction animation using a black-and-white alpha mask with color blending.
SP2_VFX_MagicalMeshes	A lit shader that allows meshes to appear magical, with added motion from two noise textures and an additional option for fresnel and dissolve effects.
SP2_VFX_Orb	Creates an orb effect using two noise textures in polar coordinates applied to an alpha texture.
SP2_VFX_Orb3D	Creates a 3D orb effect using two noise textures applied to a sphere mesh, with a fresnel effect and color blending.
SP2_VFX_PBRTexture_DecalConjunction	Helps create a decal with a PBR texture, featuring a conjunction animation and an added outline. MaskMap: (R: Metallic, G: Smoothness, B: Height, A: Emission)
SP2_VFX_PolarDecal	Generates a circle using two noise textures in polar coordinates for a decal projector.
SP2_VFX_PolarMesh	Generates a circle using two noise textures in polar coordinates with color blending for a mesh.

SP2_VFX_ProceduralParticle	Generates a procedural animation for an alpha texture with noise motion.
SP2_VFX_Shield	Creates separate front and back renders with different noise textures for a sphere-shaped mesh, featuring a wave texture animation, fresnel effect, and color blending.
SP2_VFX_SimpleDissolve	An unlit shader that allows meshes to dissolve, with an added procedural texture effect used as the albedo.
SP2_VFX_SimpleMesh	A lit shader with an option for a fresnel effect.
SP2_VFX_SimpleMeshArea	Generates a simple procedural gradient with soft particles.
SP2_VFX_SimpleParticle	Creates a simple particle with a texture and soft particles, imitating the default built-in particle shader.
SP2_VFX_SphereArea	Generates a procedural texture with a fresnel effect that works with sphere meshes.
SP2_VFX_Thunder	Helps give motion to thunder textures with offset movement, dissolve, and distortion.
SP2_VFX_Tomes	A lit shader that allows Tome meshes to appear magical, with emission mark motion driven by procedural noise and an additional option for a fresnel effect.
SP2_VFX_Tornado	Creates a simple tornado effect using two noise textures with added vertex animation.
SP2_VFX_Tornado_Advance	Creates a more complex tornado effect using three noise textures with added vertex animation, fresnel effect, and color blending.
SP2_VFX_Trail	A shader that creates motion at the end of the trail texture, with the option to add two noise textures for extra depth to the original trail, and color blending.
SP2_VFXGraph_ThunderCurve	Helps give motion to thunder textures for VFX Graph with offset movement, dissolve, and distortion.

SP2_VFX_Liquid	Creates the illusion of liquids using two noise textures, with multiple customization options for any type of liquid.
SP2_VFX_LiquidDecal	Creates the illusion of liquids using two noise textures for decals

SCRIPTS

SP2_VFXAuraDecal	Allows control and animation of the alpha channel of aura decals through an animation clip or Timeline.
SP2_VFXDecalAnimator	Allows control and animation of most decals through an animation clip or Timeline, with options for color, intensity, alpha, and conjuration.
ZakhanSpellsPack2 (Assembly Definition Asset)	Includes or excludes parts of the decal scripts code depending on which render pipeline is active when the game is built.
SP2_RotateObject	Rotates an object around a given axis at a specified speed.
SP2_SplinePlayer	Plays a spline animation using the Spline package, for projectiles and spells that require smooth trail movement, for example: <i>Spell_Dark_6</i> .
SP2_VFX_Tome	Animates the position of tomes along the Y axis using an animation curve, and rotates them around a given axis at a specified speed.
SP2_VFXDecalTrail	Sends a call to a VFX Graph to create decals when a particle system is emitting.
SP2_VFXParticleCollision	Sends a call to a VFX Graph to emit particles when a particle system collides with something.

DEPENDENCIES

- Cinemachine package (required for the demo).
- Input System package (required for the demo).
- TextMeshPro Package (required for the demo).
- VFX Graph package.
- Splines package.
- Shader Graph package.
- Timeline package.
- URP or HDRP 17.0.0 or higher.

RENDER PIPELINES:

URP:

- In URP, it is necessary to have **Depth Texture** and **Opaque Texture** enabled in the **Universal Render Pipeline Asset** for the effects to work properly. If they are disabled, some particles may not be visible when the game is built.
- **Forward+** and **Decal Feature** need to be enabled in the **Universal Render Data** for proper functionality when the game is built.

HDRP:

- HDRP uses separate shaders, materials, and some Timelines. Prefabs are variants of the original URP version of Spells Pack 2.
- Do not remove the original URP version, as many of its assets are dependencies for the HDRP version.
- Do not use HDRP assets if both URP and HDRP packages are installed in the same project, as this may cause unwanted visual artifacts.
- Some issues may occur in HDRP with VFX Graphs that use custom shaders they might not be visible. If that happens, open the VFX Graph, select the Output Context (render node), and disable Alpha Clipping in the Inspector Window. This option can sometimes be enabled automatically during the import process.

- Sometimes, when importing the HDRP package of Spells Pack 2, all decals created with VFX Graphs may have their Exposure Weight changed to 1 instead of the default 0.1, which can make most decals invisible.
